Hi Accenture Hiring Team,

Hope your day is going well so far! I'm greatly interested in the **Application Developer** role at **Accenture**; my qualities and passions in software development, along with my experience in **Java and AWS** make me a qualified candidate for this role and a potential key component of your team.

Throughout my career, I've had diverse experiences in software engineering, specifically at **Lockheed Martin** and **CDK Global**. These experiences have allowed me to develop skills directly related to this role, and I'm eager to leverage my expertise to contribute to Accenture Flex.

These are some of the skills I can bring to Accenture:

- **Java:** At Lockheed Martin, I developed and implemented Java-based server software for safety-critical power infrastructure, achieving over \$40,000 in savings compared to hardware solutions. Furthermore, I designed and implemented monitoring functionality for the Long Range Discrimination Radar (LRDR) system, overseeing the health and status of over 1,000 hardware components and integrating power toggle features to facilitate efficient maintenance activities.
- **AWS:** I have experience with AWS from deploying a serverless REST API with AWS Lambda and API Gateway for a personal project, [Flyingcarz.io](https://flyingcarz.io), which tracks and visualizes trends in automobile market prices.

These are just a few of the qualifications I can offer if given the opportunity to work for Accenture. Thank you for your time and consideration. I hope to hear from you soon!

Sincerely,

Farzin Adil
